Despite all negative reviews this game is rather good and I highly recommend it. It's not so expensive and I have much fun during gameplay.. It's fun to play, I really like it! If you like to build things and always want to try to improve processes then this is a game for you!. Looks like someone copied the game "Big Pharma" and changed the theme so it looks like the game "Factorio". It is not a really bad game, but there are alternatives with the same gameplay/setting which are much better.. dont get it. I don't like this game. It's confusing, lacks information regarding items and their uses, even the tutorial glitches! Would ot recommend buying this - waste of money.. editing to make review better :) after looking around found out the first research is completed. but one thing that is making me mad is the fact that it randomly stops working before i can get a chance to save after some progress. only thing i hate about it.. Good game! Needs a bit more work but a good game!. All of the negative reviews for this product seem to do two things: 1.) Compare the game to factorio 2.) Ignore the fact that is an \$8 game Yes, the correlations to Factorio are obvious. Yes, there is some growth for improvement in the graphics. In the end you paid eight bucks for a game that is still pretty fun and a little challenging. Best game ever? No. Worth the purchase price? Yes.. A little limited but still fun.. 46 minutes in and the game has crashed 4 different times. Everything on my end seems fine, I have no problems running anything else. Any help is appreciated.
